

Rowan Ranger Parent Stock

NUTRITION SPECIFICATIONS

2018

An Aviagen Brand

Introduction

This booklet contains the nutritional recommendations for Rowan Ranger® parent stock and is to be used with the **Parent Stock Management Handbook** supplied by Aviagen® and the **Rowan Ranger Parent Stock Performance Objectives**.

Performance

To achieve optimal reproductive performance, it is important that the body-weight profiles recommended in the Rowan Ranger Parent Stock Performance Objectives are followed. For the nutritional recommendations that follow, nutrient specifications presented have been based upon daily energy allocations that enable body-weight profiles to be achieved.

Please note, these nutrient recommendations are based on the specified energy levels. Adjustment of nutrient levels must be made to reflect the feeding of different energy levels. Feed allocation should be determined by body weight and egg production levels, and therefore altered to maintain the recommended weight and egg production profiles.

It may be beneficial to use a separate male diet during the production period. A specification for a male diet is provided in this booklet.

For further information regarding these recommendations or for more specialized situations and advice on local markets, please contact your Aviagen Nutritionist or any Aviagen Representative.

Digest = Digestible

* Energy base value. Nutrients should be factored accordingly when feeding differing energy values.

^a Breeder 2 and 3 can be useful to help control egg size and improve shell quality.

NOTES: These feed specifications should be used as a guide. They may require adjustment for local conditions, legislation and markets.

Rowan Ranger Parent Stock Nutrition Specifications

Male Parent Stock Nutrient Specifications

Feed allocation will be determined by male body weight and condition.
The male diet should be introduced when birds are moved to the laying house or at light stimulation.
